Report

No.: 2112-N-17987
Date of arrival: 27-12-2021
Date of report: 30-12-2021

Patient identification:	Dog	female	* 01.03.20
	Duitse Staande		
Owner / Animal-ID:	Leenen, Dwayne		
Type of sample:	EDTA		
Date sample was taken:	22-12-2021		

Name: **Ebba Van De Peelven**
Stud book no.: **3187888**
Chip no.: **528140000779343**
Tattoo no.: **---**

junctional epidermolysis bullosa (JEB) - PCR

Result: Genotype N/N

Interpretation: The examined animal is homozygous for the wildtype-allele. It does not carry the genetic variant that is inherited together with the causative mutation for JEB in the LAMA3-gene.

Trait of inheritance: autosomal-recessive

Scientific studies found correlation between the mutation and symptoms of the disease in the following breeds: German Shorthaired Pointer

Please note: In extremely rare cases the mutations can be uncoupled.

vWD type II - PCR

Result: Genotype N/N

Interpretation: The examined animal is homozygous for the wildtype-allele. It does not carry the causative mutation for

sample ID: 2112-N-17987

vWD type II in the vWF-gene.

Trait of inheritance: autosomal-recessive

Scientific studies found correlation between the mutation and symptoms of the disease in the following breeds: German Shorthaired Pointer, German Wirehaired Pointer

The current result is only valid for the sample submitted to our laboratory. The sender is responsible for the correct information regarding the sample material. The laboratory can not be made liable. Furthermore, any obligation for compensation is limited to the value of the tests performed.

There is a possibility that other mutations may have caused the disease/phenotype. The analysis was performed according to the latest knowledge and technology.

The laboratory is accredited for the performed tests according to DIN EN ISO/IEC 17025:2018. (except partner lab tests).
